## **SCRUM ACTIVITY:**

# Scenario: Developing a Student Management Portal

## Sprint 1: User Authentication and Dashboard UI (2 Weeks)

- User authentication:
  - o setup backend authentication using JWT for student registration and login.
  - o adding login logout and registration tab
- Front end authentication integration:
  - o create login and registration page using React framework.
- The Dashboard UI:
  - o where we are going to create the dashboard layout including different tabs consisting of student attendance and details using the react
  - O It is a user-friendly environment and it has a secure login and authenticated responsive and user friendly interface

# Retrospectives:

#### Goals:

Implementing a secure and scalable authentication system, ensuring responsiveness across devices.

### What went well:

- Authentication System Stability
- Performance Optimization

### What Challenges you have faced:

API Response Time- some backend authentication requests were slower than expected

### Improvement:

- Documentation improvement with encryption methods for storing and explain how JWT tokens are handled securely.
- Common UI bugs and solutions.
